

Digitalisation specifications

Your challenge

You want to digitize your business and create a paperless, more efficient office? You are wondering what scope of services should be covered by the system? You want to know which system can meet your needs? You lack the time for a systematic analysis of processes and requirements? We would be happy to support you in the preparation of specifications for your digitalisation.

Our service

- Systematic analysis of your current processes and any existing digitalisation solutions
- Common definition of the target state and target processes
- Structured recording and documenting of your requirements in the form of specifications according to VDI/VDE 3694
- Comprehensive research of digitalisation solutions (e.g. RFID, AR technology, internet of things)
- Combination of technologies for digitalisation scenarios tailored to the requirements

Our commitment to quality

- Systematic approach coordinated with your input
- Structured documentation of requirements and digitalisation scenarios
- Professional project management as well as methods and facilitation skills

Your benefits

- Independent and objective assessment of actual processes
- Generation of structured specifications according to VDI/VDE 3694 for future system selection and implementation
- Inclusion of new digitalisation technologies and the current state of research and technology
- No committing of internal resources
