

ERP / MES system selection

Your challenge

Your company has experienced large growth in the past, and you are not using a professional ERP or MES system? Your existing system does not meet the requirements of your processes, customers and employees (any more)? You want to implement a new ERP or MES system, but do not know which of the numerous software solutions on the market fit your company? You do not have sufficient resources for a systematic selection process? Then we would be happy to support you in the selection of a suitable ERP or MES system.

Our service

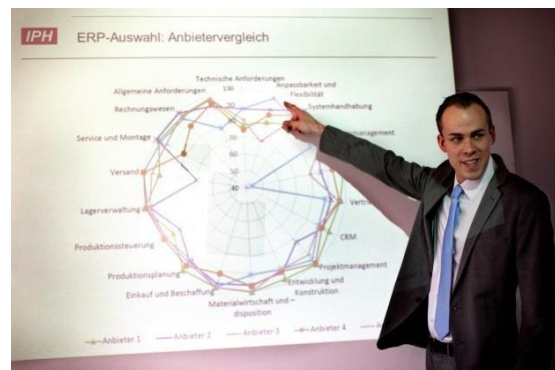

- Analysis and optimization of business processes
- Derivation of requirements from the company processes (including prioritization) and documentation in specifications
- Market analysis and pre-selection (approx. 6-8 systems)
- Synchronization of the system functionalities with your specific requirements and detailed selection (approx. 2-3 systems)
- Vendor and system presentations based on defined scenarios as well as final selection and integrated costing
- Assessment and documentation of the selection decision made

Our commitment to quality

- Systematic and structured approach
- Comprehensive documentation of your requirements and a systematic, understandable comparison with the system functionalities
- Comprehensive documentation of results and suggestions for improvement
- Guarantee of a speedy selection process through professional project management

Your benefits

- Systematic, vendor-neutral selection process
- Consideration of comprehensive knowledge of the ERP / MES market for machine and plant construction
- Complete and structured specifications as a prerequisite for targeted testing of system functionality and system implementation
- Secure investment decision
- Consideration of long-term production planning expertise and best practice experiences
